license.

The abstract must stand alone, meaning there are no quotes in the abstract. The abstract must be written briefly to inform the reader about the clarity of the research conducted. The abstract includes the reasons for selecting the topic or the importance of the research topic, research procedures and methods (Technic collecting data, Instrument collecting data, and Technik analyzing data), as well as findings and discussion. The abstract must be relatively clear for the reader who provides information to understand the contribution of the manuscript and its usefulness for the development of science and technology. The manuscript title, author's name or other identifying references do not need to be in the abstract. Abstracts are written in English, consisting of between 150-250 words, book atiqua, size 11 Pt.

Keyword : Keyword-1; keyword-2; keyword-3 (word by word based on Alphabetical min.3, max.5) etc.

How to cite this article:

Author Name (2026). Title. *Judicia Suprema*. 1 (1). 01-10. DOI: <https://doi.org/xxxxxx>

1. INTRODUCTION

Introduction, (Book Antiqua, size 12 pt), a more detailed description or component related to the contents of the introduction, can be seen through the following writing sequence: First, Presenting the argumentation of the problem studied (research problem) from the issue / phenomenon that occurs, telling the phenomenon or case studied, social facts and what is crucial from the facts studied, which are supported by qualitative and quantitative data, the problem in writing the article is obtained by photographing the gap between *das sein* and *das sollen*. Second, A literature review / review of relevant research that compares this article with the results of other similar studies, then explains the similarities and differences (raises the position of novelty). Third, State the reasons why the study issue in your article is important to be researched and then written in this article (explain what the contribution or benefit is).

Fourth, Formulate the problem (research question) or research objectives that will be discussed.

2. METHOD

In describing the research method, the author is not allowed to use sub-chapters, but must be clearly narrated with paragraphs (the number of paragraphs is adjusted to the needs). The description of the method must be implementative, in accordance with what is done by researchers in the field. So that the description of the method is not a description of the definitions of research method experts. Basis: What 1 sentence, why 2 sentences, how 3 sentences/process described: interview how the process: (1) Unit of analysis/Material object: location, case, group of people, event, artifact. (2) Research design: method. (3) Where to source data: respondents, informants, manuscripts, online news, Ministry of Religious Affairs statistics. (4) Data collection methods: using questionnaires or interviews. (5) Data analysis is done in 3 stages, explain. What we have done to realize this work, must be clear. Academic honesty is conveyed: there were 2 informants but 1 could not be interviewed, refused to be interviewed.

3. RESULT AND DISCUSSION

3.1. Headings, tables and figures

In the form of data from the field obtained from research, this is descriptive data. This is very necessary as a result of consideration between the research findings in the field and the theory related to the research discussion. The findings are presented in the form of summary data only but carefully, not detailed data, can use tables, graphs, then explained in narrative words. Why is it not appropriate, why is it appropriate, why is the practice like that, mention the source of the interview. Research findings/results consist of descriptive statistics, assumption test results, and hypothesis test results (if any and are quantitative) or data from interviews and observations or other qualitative data (if qualitative) or data from critical literature reviews, then critically analyzed, and presented sequentially or integrated. The results presentation section contains the results of data analysis. The results of this research are flexible, meaning that in one sub-chapter the results of this research can contain several research results if there are many things to be revealed.

If there is a table/graphic/picture/photo that contains a presentation of the results of the analysis that is already meaningful and easy to understand quickly. Tables/graphics/pictures/photos do not contain raw data that can or must still be processed.

Table 1. Table title. Table captions should always be positioned *above* the tables.

Heading level	Example	Font size and style
Title (centered)	Core	16 point, bold
1 st -level heading	1 1st level	12 point, bold
2 nd -level heading	1.1 2nd level	10 point, bold
3 rd -level heading	Headings. Text follows ...	10 point, bold
4 th -level heading	<i>Remark.</i> Text follows ...	10 point, italic

Figures. Figures need to be inserted separately as a .jpg or .png file and must be referred to in the text, for an example see **Figure 1**.

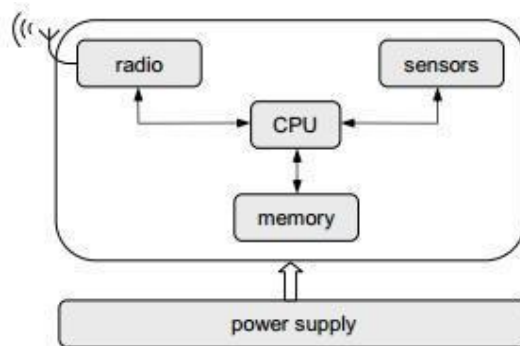

Fig. 1. Architecture of a typical wireless sensor node.

3.2. Equations, formulas and code

Equations and formulas. All equations and formulas should be referred to in the text using consecutive numbers in parentheses, see equation (1) for an example. Displayed equations or formulas should be centered and set on a separate line with an extra space above and below. They should be numbered for reference and the numbers should be consecutive, with numbers enclosed in parentheses and set on the right margin.

$$a + b = c . \quad (1)$$

Equations and formulas should be punctuated in the same way as ordinary text but with a space before the punctuation mark.

Code. Program listings or commands in the text are set in typewriter font (CMTT10 or Courier) and referred to in the text.

Example of a Computer Program from Motaz Abdel A., (2013) Start programming using Object Pascal. Legally Free Computer Books, US.

- a. Program Project;
- b. Uses
- c.
- d., etc.

Discussion or analysis, namely the author focuses directly on answering the formulation of the problem or research objectives written in the background of the problem (introduction), which is written systematically, analyzed using relevant theoretical studies reinforced by relevant previous research studies. The discussion here contains the findings of more detailed problems identified by the author related to the research being researched or written. In writing the discussion or analysis, it is preferred to use reference sources from scientific journals. Related to tables or photos, they are written in the middle or at the end of each text that describes the results/research findings. The discussion is written attached to the data being discussed. The discussion of the table contents should not be separated from the data being discussed. Table titles are written centered, all words begin with capital letters, except for conjunctions. If more than one line is written with single space.

4. CONCLUSION

The content of the conclusion is the formulation of answers to research objectives and research hypotheses, not a summary of research results. Conclusions are made concisely, clearly and concisely based on the results and discussion, made in paragraph form (not numbers), contain research findings as a synthesis between the results of data analysis and the results of the discussion, and emphasize new things that contribute to the development of religious, social and cultural sciences.

Recommendation: It contains academic recommendations, concrete follow-ups, or policy implications for the conclusions reached. The content of the suggestions must be in line with the discussion. (conclusions and suggestions are a maximum of 5% of the total pages of the journal manuscript).

REFERENCES

The references in this article use **APA Style 7th edition**, all references must be in the same format as the ones at the end of this document and the reference list must include all cited literature. We suggest the authors to use management reference system (Mendeley, Zotero) Example:

DECLARATION OF CONFLICTING INTERESTS

Please state any conflicting interests of this publication and research. If there is no, please type:
The authors state that there is no conflict of interest in the publication of this article.

FUNDING INFORMATION

Please provide information for funding assistance. If there is no funding assistance, please type: None

ACKNOWLEDGMENT

Contains acknowledgments to funding institutions, and/or individuals who have assisted in conducting research and writing manuscripts. Recognize those who helped in the research, especially funding supporter of your research. Include individuals who have assisted you in your study: Advisors, Financial support, or may other parties have involved on the research.

GENERATIVE AI STATEMENT

Authors are requested to disclose any generative AI process during writing the paper or doing research.

During the preparation of this manuscript, the author(s) used [Tool Name, e.g., Gemini 3 Flash] to [Purpose, e.g., refine language and improve readability]. Following this process, the author(s) critically reviewed, edited, and validated the output to ensure accuracy and scientific integrity. The author(s) maintain full accountability for the final content. AI was used solely as a supportive tool and is not credited with authorship. No original data analysis or interpretations were performed by the AI without human oversight.
